A = can be used in combination with bumblebees but make foragers re-enter hive anyway before applying spray solution.

B = remove the bumblebee hive before product application and until after the persistence period (X) indicated in days.

C = do not use in combination with bumblebees.

1 = non-toxic, mortality < 25%. Can be used in combination with non-target organism.

2 = slightly toxic, mortality 25 – 50%. Do not release beneficial immediately before and/or after treatment application; keep a min 24-hour time interval between spray application and release of non-target organism. If possible, apply first Naturalis, and then release beneficials.

3 = moderately toxic, mortality 50 – 75%; keep a min. 5-day time interval between release of non-target organism and spray application.

4 = toxic, mortality > 75%; keep a min. 7-day time interval between release of non-target organism and spray application.
